CS student building AI-powered products end-to-end, seeking APM / AI Product / Product roles

PROJECTS

StrengthAI | AI Workout Tracker

June 2026 – Present

- Identified that training complexity and decision fatigue drive user churn in fitness apps, and scoped StrengthAI around **data-grounded insights** instead of raw logs, from problem statement to shipped feature
- Architected the **data model** and **fatigue-detection logic** for an **AI-powered** strength training app, including **guardrails** (e.g., flagging low-confidence recommendations for user review rather than auto-applying them) to keep AI insights accurate and non-speculative
- Integrated third-party exercise and **LLM APIs** with secure backend key management to generate **personalized, data-backed** training recommendations across **100+ logged exercises and variants**, currently in testing with **20 active users**
- Owned the product end-to-end solo: problem framing, technical architecture, and UX

Bubble Mage | Steam Game

Jan 2026 – June 2026

- Designed level layouts and physics-based traversal mechanics for an open-world exploration game built in C#, then ran **5 iterative playtesting cycles with 40+ groups**, translating **player feedback** into balance and difficulty changes
- Built a **100+ person Steam wishlist waitlist** pre-launch, with full ownership of design, mechanics tuning, and audio implementation
- Pitched the game to a live audience of 500+**, and proactively recruited collaborators to grow the team, building buy-in and support beyond the initial scope of the project

EXPERIENCE

UCSC Athletics and Recreation

Santa Cruz, CA

Building Operations Attendant

Sep 2024 – Jun 2026

- Ran day-to-day gym operations, including opening/closing, equipment setup, and safety and cleanliness standards, for a facility serving **1,000+ students and staff daily**
- Redesigned equipment maintenance and inventory procedures, **reducing equipment downtime by ~40%**, and performed routine repairs and inspections
- Supported students, faculty, and staff with facility orientations and inquiries; **recognized by management** for customer service and problem-solving

Boys & Girls Clubs

San Francisco, CA

Team Leader

Sep 2019 – Jun 2021

- Led a **team of staff** delivering daily programming for **25+ club members**, adapting plans on the fly to keep sessions engaging and on schedule
- Set clear expectations and delegated responsibilities across the team, coaching staff through day-to-day challenges and stepping in to resolve issues before they affected programming

Technical Skills: Python, C#, JavaScript, SQL, React, HTML/CSS, Shell Scripting, Unity, **LLM/API Integration**, Secure Backend Development, GitHub, Pure Data, OSC, Reaper

Product Skills: Problem Framing & Positioning, Data-Informed Feature Design, User Research & Iterative Testing, Roadmapping & Prioritization, Cross-functional Technical Collaboration

EDUCATION

University of California, Santa Cruz

Santa Cruz, CA

B.S. Computer Science: Game Design

June 2026

Relevant Coursework: Data Structures & Algorithms, Computer Systems and C/Assembly Programming, UI/UX, Game Systems, Rapid Prototyping, Game Design Studio, Business of Games
